Photoshop, a piece of software from Adobe, is the most widely used graphics editing software on the planet. The success of Adobe Photoshop made designers become easier to hire and more valuable. Unfortunately, the Photoshop software was also used to edit pornographic content. Adobe Photoshop GmbH was founded in 1988. It was originally known as "Netscape Graphics" before being renamed after the company's co-founder, John Warnock. In 1998, the company name was shortened to simply "Adobe". In June 2003, a 20 percent price increase was made in the United States. In order to fight it,

Adobe had to close the company headquarters in San Jose, California. Adobe Photoshop is an image editor for designers and photographers. It is also used for creating graphics and graphics editing. However, Photoshop has gained a reputation as a tool used by pornographers to create high-quality pornographic content. People are constantly changing things about their bodies in the world. They are always happy with the changes and improvements that they make. According to experts, Photoshop has become the most widely used professional image editing software. Photoshop was originally designed by Adobe, which is a computer software company. The first version of Photoshop was released in 1991. Today, Photoshop has become a pretty important tool for people who make websites, graphic design, websites, and comics. The software is a relatively powerful graphic editor. It is also used for creating graphics and motion graphics. It is a popular photo editor because it can edit images really well. However, Photoshop is also used for editing pornographic content. Adobe does not discriminate between the work of Photoshoppers and website designers. Therefore, it is pretty bad for companies to hire Photoshoppers. In order to make money with their employees, companies should send their employees to school and give them certificates. Companies also need to give their employees health insurance and make them start on time. However, if employees work only for a small company, they are not able to get these things. Most people work for a company for a lot of years. If they have more money, their company will be more successful. However, if their company does not pay them well or let them work at all, they will quit. They will also make use of Photoshop to see how to create something and know more about other professionals in the graphic design industry. The graphic design industry is important. The graphic designers in the industry should have great Photoshop skills. Like any other industry, graphic designers need to work a681f4349e

Q: Node.js (Express.js): how to allow only GET and POST requests in the REST API? How to allow only GET and POST requests in the REST API? Is it possible? I've got the following code, it works perfectly: `app.get('/', function(req, res) { res.send('Welcome, user'); }) app.post('/', function(req, res) { res.send('Hello, user'); })` but, and what I don't understand is this: `app.get('/', function(req, res) { res.send('Hello, user'); }) app.get('/user', function(req, res) { res.send('Welcome, user'); }) app.post('/user', function(req, res) { res.send('Hello, user'); })` the GET method is missing (the second one). A: You can route all traffic to /api. By default, the last route registered will take effect, so make sure to register all of your routes. Routes `app.get('/api', function (req, res) { res.send('Hello, world'); }); app.get('/api/users', function (req, res) { res.send('Hello, user'); }); app.post('/api', function (req, res) { res.send('Hello, user'); });` One of the big problems with Tesla's dual-motor power unit is that it has no means of detecting when the driver is starting the electric motor (which has a double the torque output of the regular motor) and thereby ruining the midrange setting. The company's brainiacs have designed a circuit that will measure the voltage of the electric motor's coil, and then immediately turn off the charge circuit. The explanation is simple enough, but reading it in the patent makes it all the more intriguing. Read on for the nitty-gritty. The coil is modeled to have two coils, one of which is defined as the reference coil. The reference coil is modelled to have a resistance corresponding to the resistance of the coil of the normal motor. The second coil is modeled to have

Q: Harddisk space usage on a public server I have a server, which is dedicated to a website that I manage for a client. This site uses a lot of PHP/MySQL and .NET, which although it shouldn't be very large (maybe 200MB or so) grows dramatically over time due to the build-up of images. The client would like me to add a much needed maintenance/resize page, and obviously I can't access the filesystem on the server to copy in the files from the development server (because I will need to access the server over SSH from the development laptop, which I don't have admin rights over). Is there a way I can scan the server for filesystem use (I need it to be quick, so scanning the whole server isn't ideal, and I'd prefer it to be done by the server itself) and access the memory or something similar to work out how much space it is using? It seems to me that a plugin like "phpMyAdmin" would be useful (I'm currently using XAMPP, but I imagine that this is just a matter of setting up apache and then running a 'phpMyAdmin' command?) A: If you're using a Linux host, most linux distros have a utility called "iotop" which can show you which process is causing disk activity. I assume you have a Windows host. If so, you could use a windows utility called "sptop" to show you the same data. A: On a Linux box that's has processes running in the background using filesystem, I'd have a look at iotop A: Something like this: `class MyStorage { protected`

```
$db_path; protected $memory_size; protected $free_memory; protected
$total_memory; protected $load; protected $load_avg; public function
__construct($db_path) { $this->db_path = $db_path; } public function
get_storage_info() { $h = explode(" ", file($this->db_path,
FILE_IGNORE_NEW_LINES));
```
