A: This is caused by the third-party tools used by both the Twitch viewer and the Twitch Prime service to show Twitch avatars, emotes, avatars and community items. To fix the issue, you need to exclude the Twitch account when installing the Twitch viewer. Download the Twitch Account Exclusion Tool from Twitch's Android and iOS apps Select Excluded Accounts. Select your Twitch account and uncheck the account. When installing the Twitch Prime service, go into Account Settings > Account Settings and uncheck the 'Exclude account from Twitch Prime' option. In both cases, the Twitch viewer will no longer make incorrect assumptions about the account being logged into, and the Twitch Prime service will use the correct account. Invasive fungal infections in patients with heart transplantation. Invasive fungal infections represent one of the leading causes of death in heart transplant recipients. Clinical management is based on management guidelines of established international consensus but poorly supported by clinical data. This review aims to summarize the known risk factors of invasive fungal infections and efficacy of various antifungal therapies with special focus on heart transplant recipients. The most serious invasive fungal infection in heart transplant recipients, invasive aspergillosis (IA), is a life-threatening condition with a 3-5% mortality. All patients on chronic immunosuppressive therapy after heart transplantation are at risk of developing an invasive fungal infection. However, patients without evidence of IA post-transplant have a considerably lower risk of IA. Early diagnosis c6a93da74d
