I never use the trial product, at least not for anything major. I start off with the full version and keep all my work folders and settings from the trial. I only go back to the trial to try out the trial version. Otherwise, I like the paid program. I am one of those users that needs the least amount of tools and settings (like a windows system) Because I primarily edit stationary, I use Photoshop CS5 to create business documents, and then screen/print them with Adobe InDesign and Acrobat. So far, I'm loving the new PDF features, and the Enterprise Pack of features (like compression/de-compression). It's nice that you can have all the features of the Adobe XMP stuff (plus PDF features), but the new PS interface is much better. There's a big change in the UI where many of the PS features sit above the UI in a dialog box. There's also a new Organizer that's very nice. It's got the convention of being able to organize files, actions and scripts without having a lot of clutter. There's also a new project manager. Like Elements (and the new Office), it lets you manage multiple projects in the same window, and lets you track your work and schedule much like MS Project does. This is nice, because it's good to have multiple projects going on at once, and an advanced agenda lets you manage your project much like a MS Project schedule. The Action panel for the new Organizer is nice (I don't like having to look for actions in the top panel "like above") and now has a nice preview. I like that you can now sort actions by date, type, and metadata. If you want, you can create a custom new build definition (XMP now the default, so you have the same options as the CS5 and CS6 versions of photoshop) by going to the Organizer, clicking on "Preferences" on your left side, clicking on the "Custom Build Definition" tab. Lastly, you can now install the registry into your system, similar to the previous versions of Photoshop.

Blur Batch uses the knowledge of the previous animation frames to blur the picture automatically, without giving any additional time for the user. This feature can be very effective, especially when you want an effect of even and smooth bokeh background without creating any edge lines, organic frames or getting

blurred results. To create a bokeh effect, you can simply go to Filters > Blur Batch. You can adjust the settings to suit your needs, tap OK and it will get placed where ever you want it to look really good. The Share for Review beta lets teams of designers and editors work together on Photoshop files, from the browser on any Mac or Windows device. More than ever before, designers and developers can work together, share for review, and approve visual changes in a collaborative workspace, without having to open and save files, then share between devices. The new workflow brings the Web to Photoshop. It eliminates the need to save out designs and work on them from different devices, in different locations and contexts. When working on Photoshop designs, it’s easy forget about filesystem on the back-end because visually editing in the browser removes any barriers for the designer, from local storage issues to network latency.

Our end-user customers didn't stop there. With the new 2020 features they are already finding new ways to utilize these features. One of our senior developers, Aaron Boodman, summed up his new workflow as "Heaven forbid I have any more photos come in and start editing in 2020 Photoshop!" But he also admits to not always saving every image in PS before exporting it to his editing application of choice (see his recent talk at Community Day). We may not have strict deadlines like he does, but we still get to try out these new features and see how they change our workflow. Here are our favorite tips for the fine folks at Adobe who have been testing these new features as we speak. We're not going to pretend we haven't been testing some of these features ourselves. Our developers are valuable members of the Photoshop team, many of them still using and contributing to the original design of these features.
